

LABORDE HELPS EQUIPMENT DEALER EXPAND ITS BUSINESS

In today's industrial diesel market, businesses adapt to economic downturns by expanding products and operations. H & V Equipment had the foresight to do just that. When it needed a compact pump design, adaptable to multiple high-pressure applications, Laborde Products seized the opportunity.

Laborde Products presented H & V Equipment with a complete pump package consisting of a Mitsubishi S45-DT-Tier4i mechanical diesel engine, coupled to a 3 x 2 centrifugal pump, mounted to a skid base tank with center lifting support. This versatile pump with interchangeable volutes can go from a 3 x 2 to 4 x 3 without changing impeller sizes. H & V will use the pump for pressure testing, pigging pipelines and tank cleaning applications. It successfully sold and delivered the pump package two weeks after delivery.

H & V Equipment offers new and used construction equipment. As a full service dealership it also offers repair work, hauls and sells parts for all types of heavy construction equipment.

Headquartered in Covington, Louisiana, Laborde Products packages and distributes its own line of diesel-powered equipment under Diesel America. It also distributes Yanmar, Mitsubishi, Hatz and FPT engines.
