

Laborde Products and Viking Power

The “Viking Power” is a captivating innovation of twenty years, inspired by Lars Vinjerud II and a labor of love, built into reality by Williams Fabrication of Bayou La Batre, AL. Powered by Laborde Products’ S12R-Y3MPTAW Mitsubishi engine, the 12- cylinder Tier III engine, produces 1,100 HP at 1,600 RPM. The fully mechanical design of a Mitsubishi engine and its copious amounts of displacement makes the work below deck, just as unique as the vessels itself. With some engineering in part by, C. Fly Marine of Mandeville, LA, the bow is designed to endure those rough waters the vessel may encounter at sea. Outside of the unique hull configuration, the Viking Power uses A-frames, rather than traditional booms. As well as a unique hydraulic deck crane designed for unloading catch. This one of a kind vessel is powered by Laborde's one of a kind engine, is truly a match made in scallop heaven.

Laborde Products provides innovative and disruptive engine solutions for approximately one-third of the United States, as well as the U.S. Gulf Coast for the Marine and Industrial markets. The engine distributor specializes in custom packaged diesel-powered equipment, generators, pumps, service, and support to meet the needs of those markets.
